Load control via PID + SSR - AC power

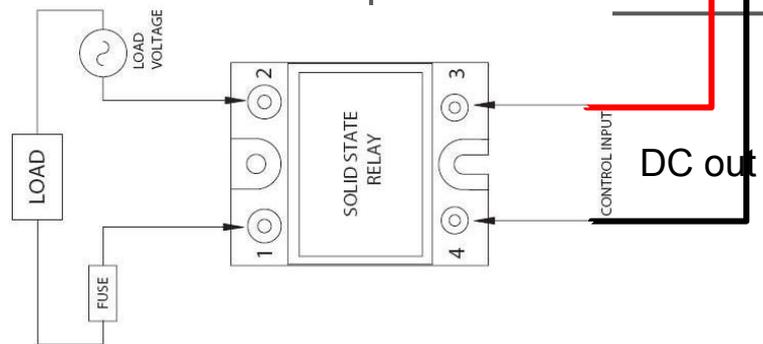

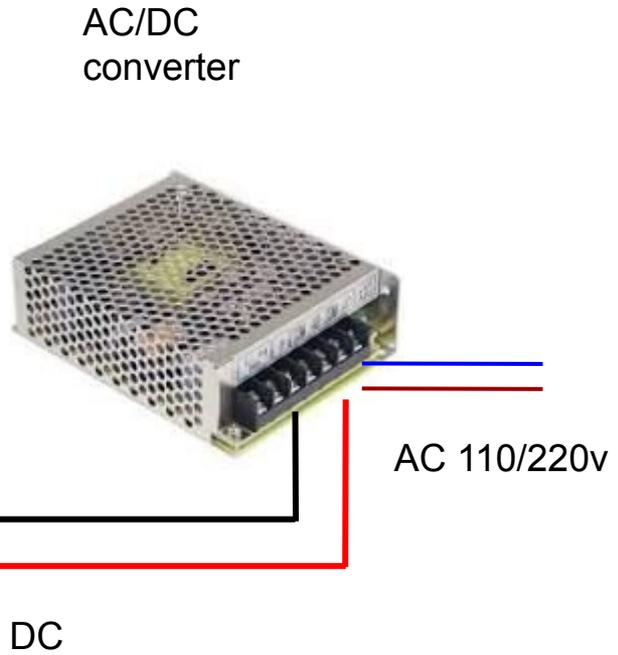

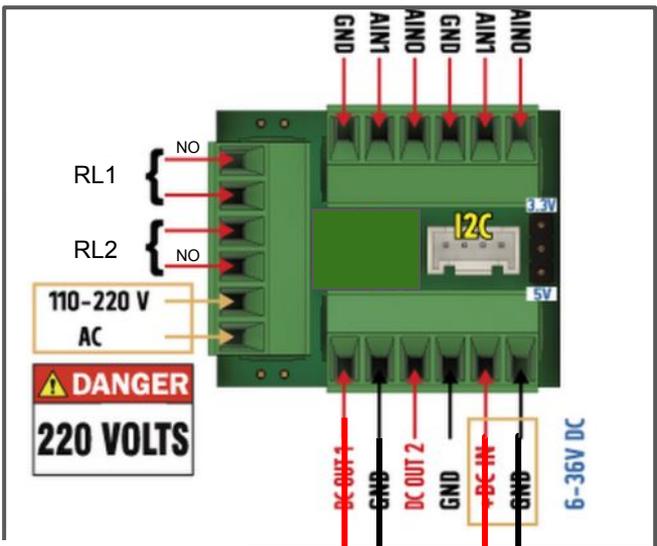

Use of SSR + Heat Sink to manage **resistive load** with PID control algorithm

Load control via PID + SSR - DC power

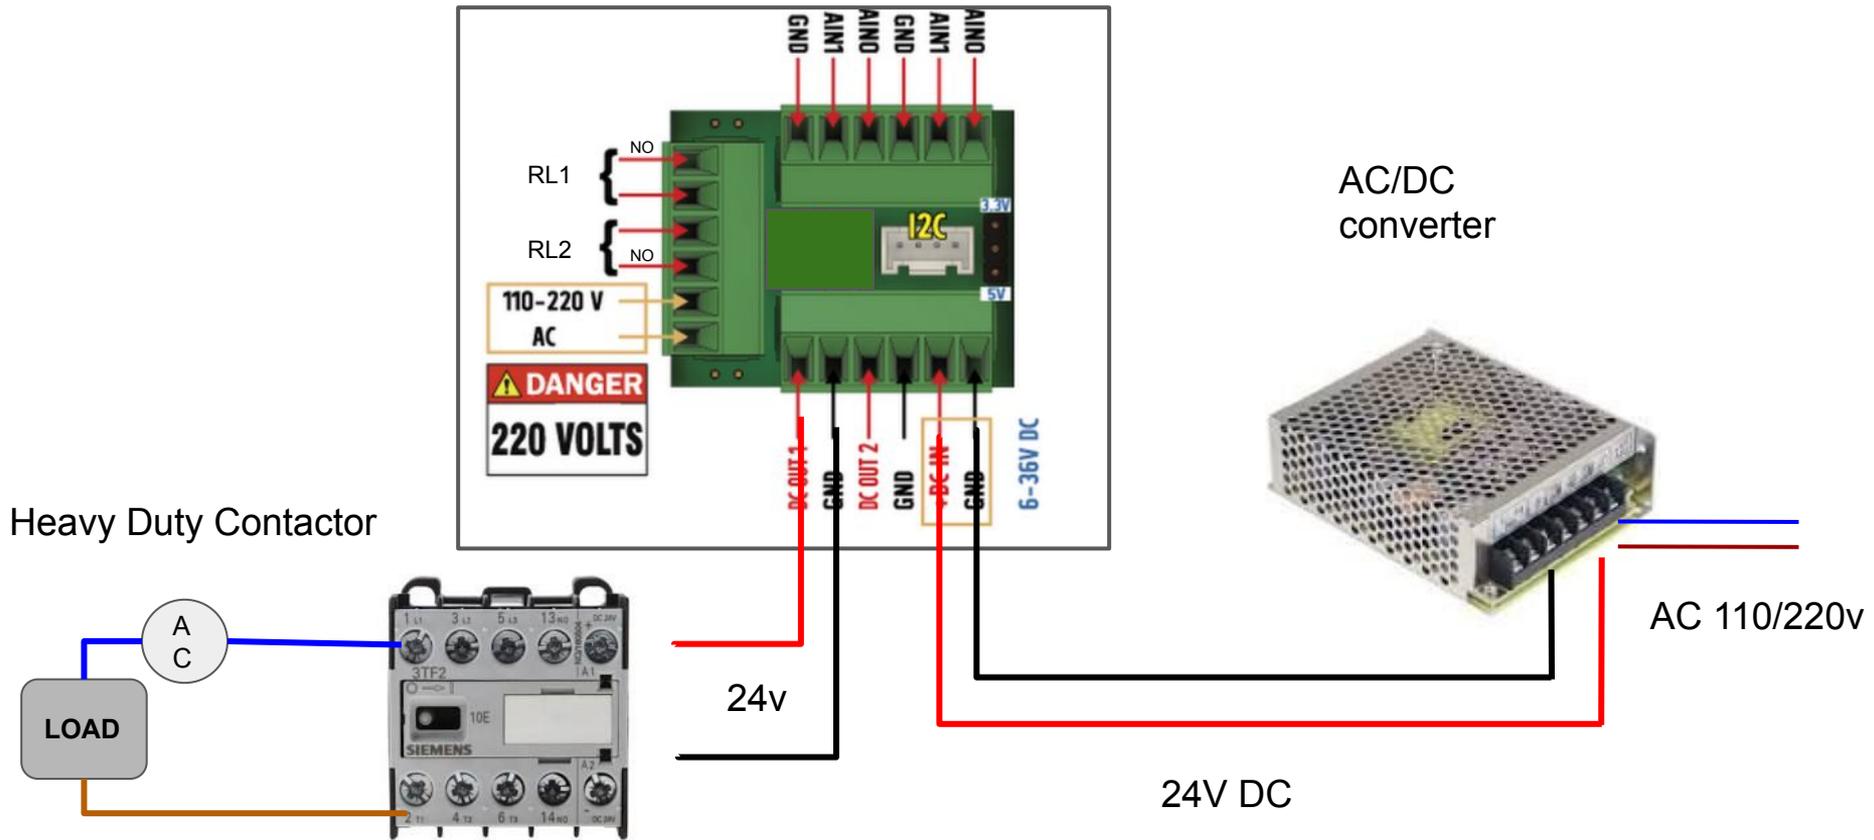

Use of SSR + Heat Sink to manage **resistive load** with PID control algorithm

SSR (solid state relay)
input 3-32v DC
out 24-380v AC

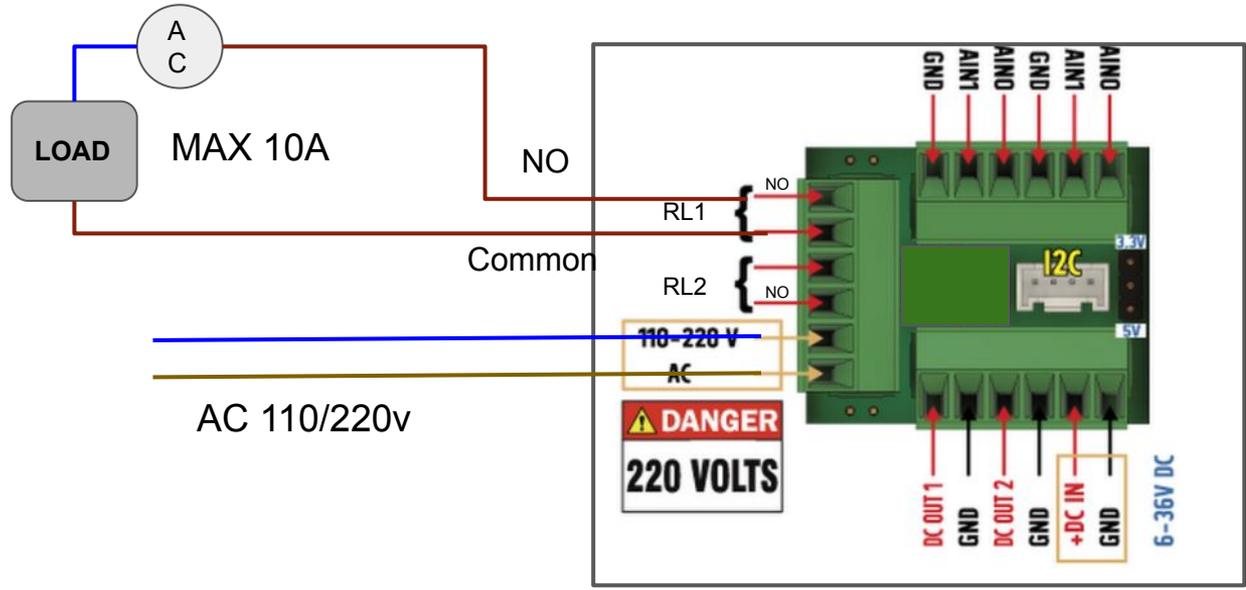

Load control via ON/OFF + Ext Contactor - DC power

Use External Contactor manage heavy duty AC load (motor, solenoid etc..)

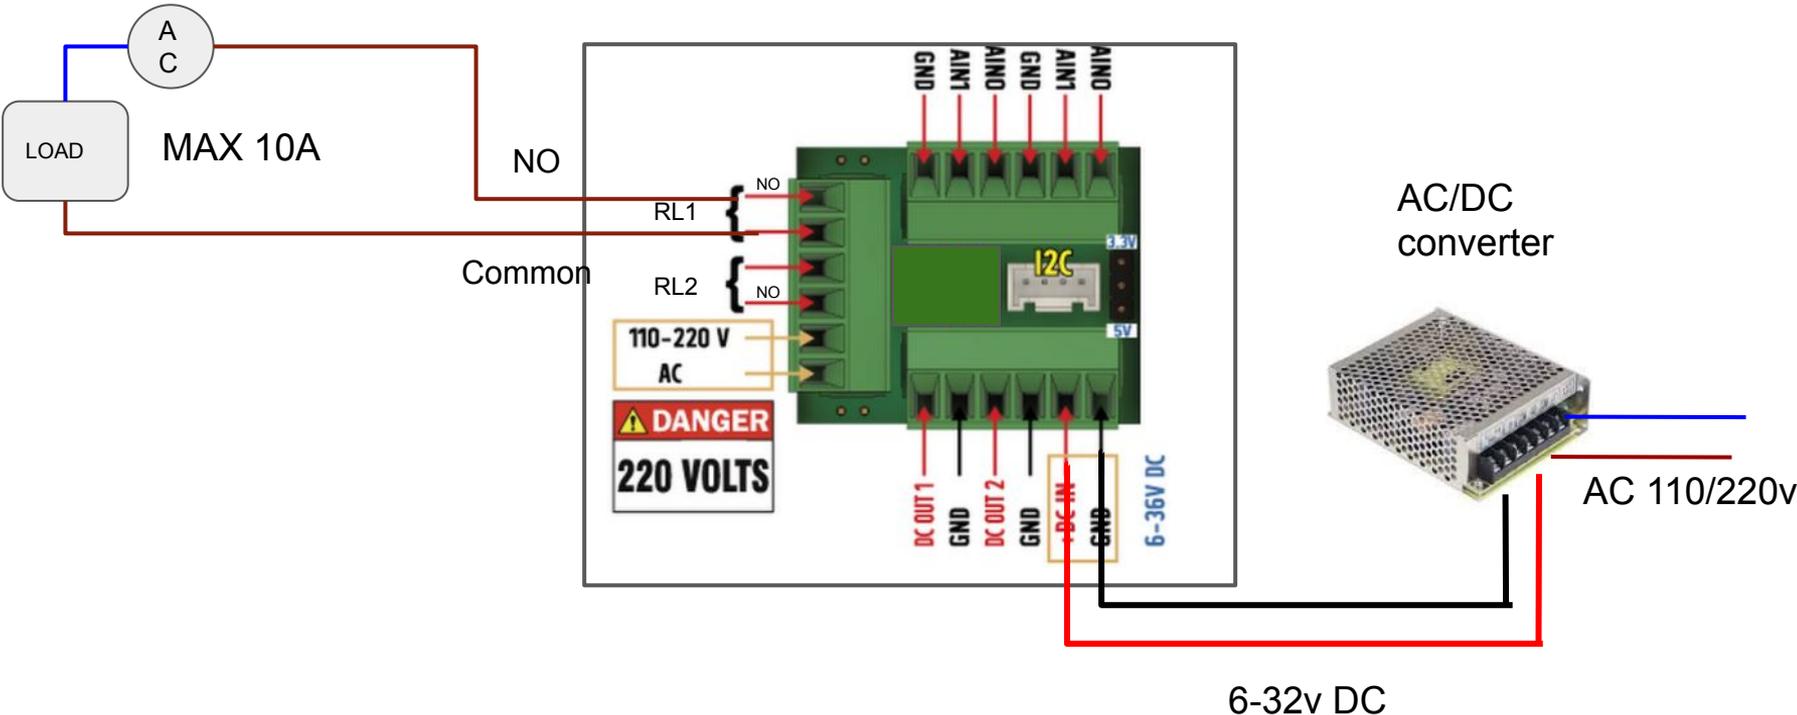

LOAD control via ON/OFF + Internal Relay - AC power

Use of Internal relay to drive AC /DC load up to 10A

LOAD control via ON/OFF + Internal Relay - DC power

Use of Internal relay to drive AC /DC load up to 10A

AC solenoid valve control via Internal Relay - AC power

Use of Internal relay to drive AC /DC load up to 10A

MAX 10A
